

Claypaky's Mini-B Wash & Mini-B Spot

Posted on October 18, 2024

Claypaky's Mini-B Wash and Mini-B Spot are the smallest LED moving lights ever made by Claypaky for the professional market.

Mini-B

Although it weighs just 7 Kg and measures only 34 cm, Mini-B Wash features the most advanced, modern optical and electronic technology. The light source is based on 40-watt RGBW LEDs, the same as the new Claypaky HY B-EYE.

Claypaky's Mini-B Wash & Mini-B Spot

Mini-B features a wide zoom ranging from 4° to 55° making this little luminaire extremely versatile. At the narrow angle, the beam produced is solid and concentrated, superb for aerial effects. At full aperture, the Mini-B becomes an excellent wash light and it can replace much heavier and bulkier equipment, on stages, in TV studios, at multi-purpose venues, and in clubs.

Mini-B Spot

Mini-B Spot is the smallest performer but clearly the star of the show. The Mini-B Spot is the perfect complement to the Claypaky Mini-B washlight, but it also has innovative, exclusive features that will make it every lighting designer's favorite choice!

The light source is based on a 70W white LED engine, capable of delivering 3500 Lumen, but with a power consumption of only 150W. Claypaky has also developed a proprietary optical unit that optimizes light intensity and luminous output.
