

Robert Juliat releases the magic of Morgane

Robert Juliat releases the magic of Morgane

Posted on October 15, 2025

Robert Juliat is excited to announce the official launch of Morgane, its new 825W LED 13°-24° followspot, which is now ready to ship worldwide. Made for the demands of today's productions, Morgane combines the renowned craftsmanship of Robert Juliat with a new approach to performance and design, offering a modern, versatile and low maintenance solution.

Robert Juliat releases the magic of Morgane

Morgane (ref 1489) is the smaller sister of Tristan (ref 1189), the long-throw (7°-14.5°) model which was launched in 2024. Together, the pair represent compact and powerful upgrades that replace Robert Juliat's traditional 1800W MSR followspot.

Brand new features

Like its larger sibling, Morgane offers a significant increase in output and efficiency with its 825W LED source available in tunable white or in fixed cool white, rivalling the output of traditional short to mid-throw followspots.

New to Morgane is a unique motorised, fully-closing iris that allows the creation and storage of presets for rapid cueing. Also new are a range of the latest accessories and options, including a remote display providing iris and intensity information for operator convenience; the ability to connect external remote controllers to operate the followspot from any position; and an optional version with left-side controls for iris, dimmer, frost and colour changer.

Same outstanding qualities

Morgane has the same superb features expected in all Robert Juliat followspots. These include a smooth flat beam, ergonomic design, electronic dimming with single-handed local control, remote DMX control, frost and colour filters, 6-way colour changer and a native CRI >90 that is perfect for performer illumination with no correction filter necessary.

Multiple uses

The variable white source offers greater versatility and eliminates the need for physical colour correction filters, simplifying set up and reducing consumable costs. The colour temperature can be controlled remotely from the console allowing real-time adjustments.

Morgane has a built-in electronic flicker-free power supply and is compatible with DMX, RDM, Ethernet, ArtNet and sACN protocols. It also has Advanced Ethernet node functionalities compatible with RDM, LLRP, zeroconf protocols.

Housed within a compact body of less than one metre-length, and offering powerful output, silent operation, smooth electronic dimming and the benefits of no lamp change due to its LED source, Morgane is also the ideal spot for front-of-house, truss and backlight positions for theatres, TV studios, fashion shows or concerts.

Heroic status

The latest LED protagonists in Robert Juliat's legendary Compact followspot range, Tristan and Morgane offer the same output, same beam angles and features as larger followspots, in a smaller body and with lower power consumption. Like all legendary figures, the warrior Tristan and the enchantress Morgane are destined to make their mark in followspot history.

Morgane and Tristan are proudly designed and made in France by Robert Juliat, steadily maintaining its technological advancements and market-leading position for over 100 years.
