

Visual Productions SPI Webinar – Available until 30 November

Posted on November 3, 2025

Visual Productions successfully hosted its first-ever live webinar last week, attracting over 200 registrants from 46 countries.

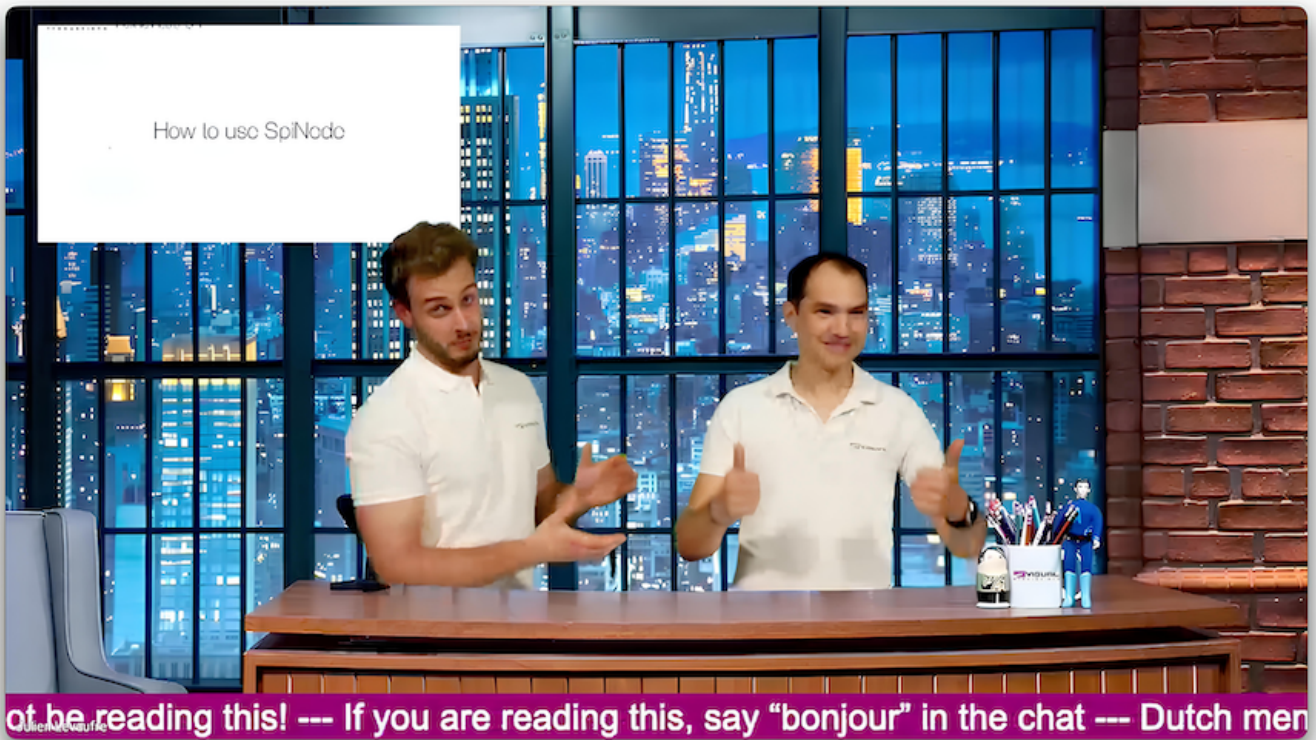

With attendees watching more than 80% of each session on average, the SPI protocol and SpiNode topics clearly resonated globally.

Thank you to everyone who participated and supported this milestone event.

While there's always room to grow, the strong engagement leaves us optimistic for future webinars.

Missed it and want access to the recording?

The recording will remain available until November 30 at 23.59 (CET). Watch replay here: <https://visa.webinargeek.com/watch/replay/5236646/e1da5b11ce2d878d792fff0ef2e7d391/>

SpiNode gets a powerful update

With the new firmware version 1.01, SpiNode features continue to expand to make it more and more powerful.

New functions include:

– Grouping page: now you can organise your pixels using ready-made group sizes, or build your own custom groups to save on control channels.

The “locate” function helps you spot and identify them in no time.

- Graph function: Instantly see your gamma tweaks for each colour with a visual graph. Every colour correction you make shows up right away.
- New layout: enjoy smoother navigation through the web interface thanks to a simplified design that makes high-level control easier and more accessible.

Upgrading?

It's simple: open vManager, hit firmware upgrade, and enjoy the most advanced version of your SpiNode.

Just make sure you're on the latest vManager version 1.8.10.
